MMLUNA
Masterpiece Models 2011

This kit includes the parts required to construct one Luna. The number of parts, and their placement is straightforward and can be determined by examining the enclosed photos and side notes.

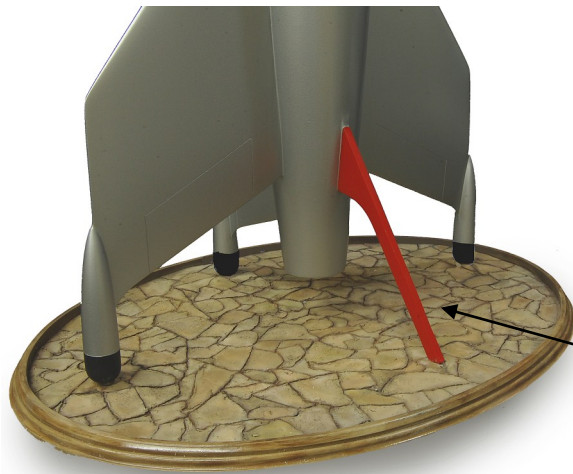

Parts List:

- 1 Rocket Body
- 2 Large Stabilizer Fins
- 1 Small Stabilizer Fin
- 1 Landing Stand
- 1 Base

Begin by attaching the 2 large Stabilizer fins to the body. Guide holes and tabs are provided to aid in alignment.

Small Stabilizer fin is positioned at 90 degrees from the Large Fin on one side. Again, position holes are provided.

Landing Stand positioned 90 degrees from Large Fins, opposite side of Small Fin. Guide tabs provided.

Position Luna onto base. Base includes positioning indentations for alignment of the craft to the base. These indentations correspond to the Large Fins, Small Fin and Landing Stand to add increased stability for display.

Use box images as painting guide.
